

# Porex Surgical Meets the Challenge

## Innovative New Products for Ophthalmic Plastic and Reconstructive Surgery

### Natural Iris Conformers

Natural Iris Conformers are temporary devices used after enucleation to maintain the shape of the eye socket and prevent closure or adhesions during the healing process.

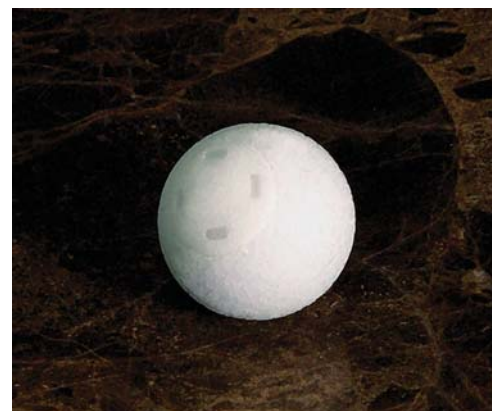

- Designed for use prior to replacement with a custom-made prosthesis.
- Natural Iris Conformers are available in six colors.
- Each color is available in three sizes: small, medium and large.

### MEDPOR® PLUS™ SST™ EZ™

The new MEDPOR® PLUS™ SST™ EZ™ Spheres combine the most exciting features offered in the MEDPOR Orbital Implant family.

- The smooth, porous anterior surface and the suture tunnels of the MEDPOR PLUS SST EZ allow for easy rectus muscle attachment without the use of an implant wrap.
- The suture holes and curved tunnels allow for easier insertion of ophthalmic needles typically used to attach the extra-ocular muscles to the implant.
- The Bioglass® component promotes more rapid fibrovascular ingrowth into the implant.

For more information about Natural Iris Conformers or MEDPOR Implants, call 1-800-521-7321 or visit our Web site at [www.porexurgical.com](http://www.porexurgical.com).
